- System should have automated self-adjusting lid that opens, closes, and can apply sealing force to reaction wells.
- Sample block temperature accuracy should be +/-0.2°C at 90°C, with a uniformity of +/-0.3°C well-to-well variation at 90°C.
- Thermal gradient for optimization of multiple temperatures in a single assay.
- Thermal block of the system should be light weighted for fast thermal conductivity.
- System should have temperature controller for multi vessel reaction and balancing regulator for high-speed scanning.
- System should have capacity of protection from atmospheric moisture.
- Optical system should allow the excitation and detection of up to five fluorescent dyes in a single reaction well.
- Optics should independently illuminate and detects fluorescence from each well with the same LED/detector pair per channel. The system should have six filtered LEDs for illumination and differentially detects emission using six filtered photodiodes (one for each channel plus FRET).
- System must have fixed optical path, directly over each well, eliminates the need to normalize for positional bias.
- The optical detection range of excitation wavelength and emission wavelength should be 450-684 nm and 510-730 nm respectively.
- System should have methods for rapid fluorescence detection.
- System should detect ≤ 10 fmol of fluorescein.
- Dynamic range of the system should be 10 orders of magnitude.
- System should have a dedicated channel for FRET and Protein Thermal Shift (Protein Melt) experiments.
- System should read all 96 wells with all channels simultaneously.
- System can be integrated with an automation system for hands-free operation.
- System should continue to run and complete a run if the software is stopped or interrupted to prevent run data from being list in case if there is unintentional interruption of the software. This function is especially valuable for precious or limited samples, whereby all data is not lost for a run that was interrupted.
- System should run real-time PCR experiments without being attached to a computer. When operated as a stand-alone instrument, the instrument will save at least 1000 run files.
